## Pregnant Women

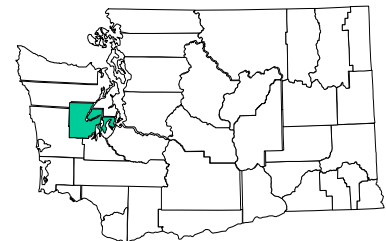

### Summary of the problem

- Although adult cigarette smoking has consistently been greater than Washington State as a whole, it is not significantly different from the state overall. Our most recent survey data showed that about 28.6% of adults in Mason County smoke cigarettes.
- Although adult smokeless tobacco use is slightly lower than Washington State as a whole, it is not significantly different from the state overall.
- Youth smoking for grade 8 in Mason County is significantly higher than Washington State as a whole. Although elevated above the state rate for grades 6 and 8, youth smokeless tobacco use rates are not significantly greater than the state as a whole.
- Maternal smoking during pregnancy is consistently and significantly higher than the state rate. In recent years, the trend is increasing in contrast to the decreasing state rate. In 2001, Mason County was among the highest for rate of maternal smoking in the state. About 25.2% of pregnant women in Mason County smoked during pregnancy, compared to 12.6% statewide.
